The Impact of Technology on the Customers of Insurance Companies

InsurTech Survey Study · Graduation Project
Shahd Jum'ah · B.Sc. Financial Technology and Risk Management
Applied Science Private University · 2023/2024

OBJECTIVE

To measure how aware insurance customers in Jordan are of InsurTech, and how qualification, job, age and gender affect that awareness.

METHOD

- Designed a 25-item questionnaire based on previous studies
- Distributed 56 questionnaires to insurance customers in Amman; 32 were valid
- Reliability: Cronbach's Alpha = 0.943
- Analyzed the data in SPSS using means, standard deviations, ANOVA, T-test and the Scheffé post-test

KEY FINDINGS

- Customers showed high overall agreement on the importance of technology in insurance (most items scored above 4.3 out of 5)
- Qualification made a significant difference: customers with a bachelor's degree were more aware than those with a diploma or less
- Gender made a significant difference: female customers agreed more strongly than male customers
- Significant differences were also found by job and age on some items ($\alpha \leq 0.05$)

RECOMMENDATIONS

- Launch awareness campaigns about InsurTech and its benefits
- Explain InsurTech in simple terms, focusing on convenience, cost and ease of use
- Encourage insurance companies to invest in digital platforms

SKILLS APPLIED

Survey Design · Data Analysis · SPSS · Statistical Testing (ANOVA, T-test) · InsurTech · Risk Management
